Art Unit: 1746

1. Claims 27-35 stand withdrawn from further consideration pursuant to 37 CFR

1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 8, 2007.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1, 4-8 and 13 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 36, 38, 40 and 41 of copending Application No. 10/289,936 in view of either Schmidt (U. S. Pat. No. 3,812,273) or Ettischer et al. (U. S. Pat. No. 4,696,615). Re claim 1, applicant instantly claims a dispensing system comprising a housing, an insert containing the laundry additive, and an selectively actuated puncturing element, movable between a first position and a second position to pierce the insert. However applicant claims in the '936 application a dispenser, a unit dose package containing the additive and an opening

Art Unit: 1746

actuator that is selective actuated to electromechanically open the membrane of the unite dose package, that differs from the claims only in the recitation of the actuator having a puncturing element. The patents to Schmidt and Ettischer are each cited disclosing in a dispensing system, the arrangement of and actuator movable between a first and second position to electromechanically open a membrane of a unit dose package. It therefore would have been obvious to one skilled in the art to have the system of the '936 application employ a puncturing element as taught by either Schmidt or Ettischer, since the membrane is required to be opened. This is a provisional obviousness-type double patenting rejection.

4. Claims 2, 3, 9-12, 14 and 15 stand objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 16-26 stand. allowed.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. In .Patton, Kato, South Africa'086, Germany'256 and Joshi, note the dispensing arrangement.
